

Emory Selected for Movember ASAP Network

Emory University was selected by the Movember Foundation as one of 15 academic prostate cancer centers of excellence nationwide to participate in A Survivorship Action Partnership (ASAP) USA, to be supported by a combined total of \$3 million in 2014. This national network will be collaborating on a variety of initiatives aimed at improving outcomes among prostate cancer survivors, with a strong emphasis on utilizing technology, telehealth, and innovative approaches to address survivorship issues. The network will also collaborate with existing ASAP

initiatives that are underway in Australia, Canada, and the United Kingdom. This selection represents the culmination of efforts by the urology department co-led by Dr. Theresa Gillespie and Dr. Martin Sanda, with epidemiology leadership from Michael Goodman. Movember hosted a workshop for PI's of the participating institutions that established a structure for the network and develop a process for selecting and assembling projects for the network to implement as part of the ASAP.

The global Movember community of 1 million contributing Mo Bros and Mo Sistas raised over \$114 million for men's health programs. While it is easy to figure out a Mo Bro or *Mostasche Brother*, some may wonder about *Mo Sista*. A *Mo Sista* is essentially a woman who is dedicated to supporting the Mo Bros through their moustache-growing journey. These inspirational women are committed to raising awareness of men's health issues and much needed research funds.
